Maintenance Tips

This manual contains instructions and tips that should be followed to maximize your Mobilier Jussaume hardware life- in terms of both appearance and strength. Each material requires different caring and treatment, thus products that are crafted with many materials may need a specific care method for each of these materials. Please read all of this manual.

Batyline

Batyline is a soft textile that is almost maintenance free. To clean, use a soft brush along with soft soap/detergent and fresh water. Afterward rinse off with fresh water and dry with a cloth to avoid stains on adjacent allow as stainless steel. Batyline is a textile that has memory- it stretches under a person's mass and eventually regains its original shape after the mass is removed. Avoid any contact with sharp objets as it may scratch or rip the textile. Also avoid the use of acidic agents or solvents. Avoid the use of pressure-washers. With a appropriate regular maintenance, Batyline will last for many years.

Teak

The tropical hardwood has a great reputation of long lasting. All it takes is an appropriate regular maintenance. Without any maintenance teak will not last as long and will also loose its original color- it slowly becomes dark grey. Jussaume's recommends the application of a specialized product similar to TeakGuard once a year. It's a coating that prevents deterioration. Before the application of a such product, please read carefully the specific instructions provided with the product. Unlike many other products as varnishes and sealers, TeakGuard does not peel off but gradually fades away. Thus only a light cleaning is required prior the application. Avoid pressure washing, sanding, varnishing, acidic agents, solvents or any other maintenance methods no stated

in this document. TeakGuard or similar products can be found in marine stores or shops since teak is a first-choice wood for boats.

Wicker

This material requires almost no maintenance. Clean with mild soap, soft brush and rinse with fresh water. Intensive UV exposures will result in a shorter life although high concentration of stabilizer is contained in the material- furniture covers are recommended. Avoid pressure-washing, solvents and acidic agents.

Stainless Steel

A regular maintenance prevents stains. Soft brush/cloth and soap are recommended for this care. Rinse with freshwater. Avoid alkalic and acidic agents and solvents. The provided sponge is a great tool: just rub the stainless on its length to remove scratches after rinsing. Avoid using steel-wool. 314 grade is not recommended in alkalic environment as sea sides. Please ask for 316 grade and/or electropolishing in this case.

Every product should be stored inside during winters whatever materials' assembly. Screws and fittings should be tighten after the first two weeks of usage and then every year.

Jussaume entreprises inc. cannot be held accountable for any failure caused by an inappropriate care and hence reserves the right of judging who is in the wrong (see warranty document). If you have doubts, please share with us at info@mobilierjussaume.com.
